PROFESSIONAL SUMMARY

Blockchain Engineer with 6+ years shipping production smart contracts, multi-chain wallet infrastructure, and DeFi protocols across 7 mainnets (Ethereum, TRON, BSC, Polygon, Bitcoin, Dogecoin, Solana). Cut gas costs up to 30% on DEX contracts, architected a Go-based explorer backend serving 6+ chains, and delivered DAO governance systems handling on-chain voting and treasury operations. Equally effective building high-throughput REST APIs, blockchain indexers, and event-driven microservices that bridge Web2 and Web3 at scale.

CORE COMPETENCIES

Smart Contracts & DeFi: Solidity • ERC-20 / ERC-721 / ERC-1155 • DEX & AMM Design • Staking & Yield • DAO Governance • Gas Optimization • Reentrancy Guards • OpenZeppelin • Multi-Chain Deployment

Chains: Ethereum • TRON • BSC • Polygon • Bitcoin (UTXO) • Dogecoin • Solana • Bitcoin L2 • Cross-Chain Bridging

Web3 Tooling: Hardhat • Foundry • Truffle • Remix • Slither • Ethers.js • Web3.js • WalletConnect • MetaMask • IPFS • The Graph

Backend & Data: Go (Golang) • Node.js • REST APIs • Microservices • JSON-RPC • Event-Driven Architecture • PostgreSQL • MySQL • MongoDB • GORM • Blockchain Indexing

DevOps: Docker • CI/CD • Git • Linux • Jira • Notion • Confluence

WORK EXPERIENCE

Token 13 Software L.L.C | Dubai

Nov 2025 – Present

Backend & Blockchain Engineer

- Architected a **multi-chain explorer backend in Go** aggregating **6+ mainnets** (Ethereum, TRON, Bitcoin, Dogecoin, Solana, BSC) into a unified transaction and wallet API layer.
- Engineered modular blockchain adapters for TX construction, UTXO handling, and JSON-RPC routing — **cut new-chain integration time by ~40%**.
- Shipped **staking + DAO governance contracts** on Ethereum & Bitcoin L2 — on-chain voting, automated rewards, treasury management.
- Built high-throughput REST APIs serving **blockchain queries with sub-200ms p95 latency** under production load.
- Integrated Dogecoin Core JSON-RPC & Electrs with automatic fallback — **chain-data uptime 99.5%+** across mainnet/testnet.
- Designed event-driven blockchain listeners achieving **near real-time on-chain sync (<5s lag)** into PostgreSQL.

Taif Al Joud | Dubai

May 2024 – Apr 2025

Senior Blockchain Developer

- Designed & deployed **DEX smart contracts** (swaps, liquidity pools, dynamic slippage) — processed **\$2M+ trading volume** in first quarter post-launch.
- Slashed **gas costs up to 30%** via storage packing, struct variable optimization, and SLOAD-to-memory caching.
- Integrated contracts with Web3 frontends via Ethers.js & MetaMask — **1,000+ active users**.
- Established Hardhat + Slither CI pipeline catching **100% of critical vulnerabilities pre-deployment** — **zero mainnet exploits**.

Pride Group | Dubai

Aug 2022 – May 2024

Smart Contract Developer

- Delivered staking & DAO governance contracts on Ethereum and Bitcoin L2 for **3 concurrent DeFi protocols**.
- Built cross-chain integration logic enabling **seamless asset interactions across 4+ networks**.
- Automated proposal voting and reward cycles, **reducing governance overhead by ~60%**.

DIG International | Dubai

May 2022 – Dec 2022

Blockchain Developer

- Deployed **ERC-20 + staking contracts** on Ethereum & BSC for a DeFi product serving **500+ stakers**.

- Built contract-to-backend integration enabling automated event tracking and real-time TX processing.
- Ran Hardhat gas profiling identifying optimizations that **cut deployment costs by 20%**.

SoluLab Inc | Remote

Aug 2021 – Apr 2022

Blockchain Developer

- Developed **NFT marketplace contracts** (ERC-721 / ERC-1155) with royalty splits and token-gated access — **2,000+ NFTs onboarded in 3 months**.
- Shipped multi-wallet integration (MetaMask, WalletConnect) — cross-wallet interop across 3 chains.
- Maintained Truffle/Hardhat test suites at **95%+ contract coverage**.

dtltdgers | Trivandrum

Aug 2019 – Aug 2021

Software Engineer – Blockchain

- Built **trade-finance dApps on Hyperledger Fabric** — chaincode for document verification & multi-party settlement across **4 banking partners**.
- Designed REST APIs bridging enterprise ERPs with distributed ledger infra — **automated 80% of manual trade-document processing**.
- Co-led network provisioning — peer config, channel management, endorsement policy design for cross-org consortium deployments.

SELECTED PROJECTS

- [Milestone Escrow](#) — Sequential escrow with proof + verification flow. Deployed on Sepolia. Solidity • Hardhat.
- [Uniswap V2-Style DEX](#) — Factory + Pair + Router AMM ($x * y = k$). Solidity • Uniswap V2 pattern.
- [Launchpad \(ICO + INO\)](#) — Token + NFT launchpad with tier-based staking and vesting. Solidity • ERC-20 / ERC-721.
- [TRON NFT Marketplace](#) — ERC-721 marketplace with escrow listings, TRX + USDT payments. Full-stack Node.js + React.
- [DeFi Token Suite](#) — Token + Staking + AMM + Vesting starter kit. Solidity • Hardhat Ignition • OpenZeppelin.
- [Filecoin Staking DApp](#) — FIL staking via FEVM. Solidity • Hardhat • React • MetaMask.

KEY ACHIEVEMENTS

- Cut DEX smart contract gas costs **by 30%** — storage packing, SLOAD elimination, struct optimization.
- Architected **plug-and-play chain adapter system** — new chain integration from weeks to days, now supporting **6+ mainnets**.
- Delivered **zero-exploit track record** across all mainnet deployments via Hardhat + Slither CI gates and manual audit checklists.
- Automated **80% of trade-document workflows** at dtltdgers by bridging enterprise ERPs with Hyperledger Fabric.

EDUCATION

B.Tech, Computer Science & Engineering — APJ Abdul Kalam Technological University

Kerala, India | 2015 – 2019
